

# ICONIC INSIGHTS

## Preliminary Economic Assessment (PEA)

Iconic has initiated the Joint Venture Phase I Exploration program for the completion of its Preliminary Economic Assessment (PEA) on Bonnie Claire, of which Global Resource Engineering Ltd. of Denver, Colorado has been retained to complete the (PEA).

## Bonnie Claire Lithium

The company's flagship Bonnie Claire lithium project is now 80% owned by Iconic and presents very promising resource potential. Early exploration campaigns on the property have revealed high recoveries of lithium values from sediments and additional commercially viable by-products the company can capitalize on. Iconic Minerals is operating it as a Joint Venture with Nevada Lithium, a private company which obtained a 20% interest in **March 2021**.

## Producing Lithium...

Watch this [Video](#) of CEO, Richard Kern, "Becoming a Lithium Producer"

## Investing News Network...

Iconic recently engaged **INN** and their team of professionals providing informational services, on a niche basis for Battery Metals, and more specifically Lithium Resources. In partnership, Iconic can leverage marketing and messaging to new and existing shareholders, worldwide.

**INN** has a very strong global following and are consistently ranked at or near the top of internet search tools when people are looking for education, understanding and news related stories about Lithium.

## Annual General Meeting ~ April 8th 2021

Facilitated at their offices, Iconic Minerals Ltd. held its 2020 AGM in Vancouver, B.C., Canada. All resolutions were carried with selection of Auditor and Board of Directors.

Computershare provided their scrutinizer to adjudicate the quorum and meeting votes. CEO, Richard Kern chaired the public meeting, reviewing old and new corporate business.

## INSIGHT...

Let's look at where Iconic hopes to be, come September 2021. With the prospects of accelerated funding via Nevada Lithium's intention to acquire up 50% of Bonnie Claire, the Project Development Budget has now been fully identified. Global Resource Engineering Ltd is engaged working to complete the (PEA), further drilling this Spring & Summer will confirm what should be the largest lithium resource in Nevada, USA. Upwards of 40 holes planned will map out the deposit. With the (PEA), a Plan of Operations can commence. Of course through both these phases, we continue to market the strength of Iconic's Board and Management team and their abilities to execute both the business plan and the funding strategies that will put Iconic's shareholders in the best possible position when the transition into Production occurs.

## In the Mean Time...

New extraction technology is testing innovative theory to maximize yield, improving cost recovery environmentally.

**April 7, 2021 - St-Georges Eco-Mining Corp. (CSE: SX)** is pleased to disclose that it has received the latest shipment of bulk material from Iconic's **(TSXV: ICM)** Bonnie Claire Lithium Project in Nevada.

As previously reported, St-Georges' metallurgists were able to concentrate through mineral processing and selective leaching the original feedstock by 25 folds, down to 4% of its initial mass where 99.99% of the lithium was leached into solution after 5 minutes at low temperature and normal atmospheric pressure.

Work on the Bonnie Claire Lithium Project material will now resume along side the on-going work being conducted on other hard rock lithium resources. Current efforts of flow sheet optimization will focus on front-end challenges, like concentration, and also on the later purification stage, where testing of a newly designed bounding solution should reduce the number of steps required to achieve a 99%+ lithium purity.
